

Ben is a Landscape Architect at TCE with a wide range of skills and 10 years of experience in planning, design and integrating the built and natural environments. Ben helps clients realize the full potential of their assets while considering their environmental capacity and aesthetic preferences. He is an excellent team player and enjoys working collaboratively to provide thoughtful solutions to design opportunities.

Ben grew up appreciating the splendors of the natural world in the Midwest. Now a home in St. George, VT, serves as base camp for adventures with his family in and around the Greene Mountains. Ben serves as a volunteer in the Williston area schools, educating grade school students in advanced math and natural science and coaching youth sports teams. He is also involved in community gardening throughout the area.

With nearly a decade of experience as a Licensed Landscape Architect, Ben has proven he can work across a variety of scales. At a conceptual level, he has the ability to envision creative solutions for making land use and planning decisions. While at a much finer scale, creating fine grading plans, planting plans and renderings are all well within his capabilities. Ben's rendering skills have proved very useful for depicting a visually pleasing representation of projects during the conceptual, design and construction phases.

Ben Oxender, ASLA

Landscape Architect

5 Years at TCE

Williston School District
Vermont Master Gardeners

Recent Project Experience

CVS, 1 Dorset St, S. Burlington, VT Ben was the Landscape Architect for this redevelopment of the former Friendly's site, at the gateway to South Burlington. One of the busiest intersections in Vermont, this high profile location had numerous design challenges including being an early component to an area transitioning to Form Based zoning being bound on three sides by roadway and having multiple uses on site.

Jay Peak Resort, Jay, VT Ben served as part of the design and engineering team for several phases of the Jay Peak Resort expansion projects in recent years, which included site planning, design, permitting. Ben's work at Jay Peak included detailed site design and grading for condominiums, roads, town homes and a relocated chair lift.

Land Subdivision and Development, Statewide

Additional Projects

- Copley Hospital, Morrisville
- Solar Development, Statewide
- Milton Park Planning
